

SPECIALIZED DEBURRING MACHINE

Equipment for deburring and finishing of aluminum castings. The equipment employs a diamond tool on a high-rigidity, high-speed spindle developed by Shiga Yamashita specifically for deburring machine to facilitate high-speed and highly efficient deburring and finishing.

Features

Design specialized for linear deburring ensures extremely compact equipment.
Designed for deburring of cylinder heads in mass production applications.

Structure

- Jig unit : Specialized jig
- Cutting unit : Tri-axis orthogonal (A and B axis options available)
- Cutting method : High-speed spindle
- Control panel : Space-saving design
- Console : General purpose console
