

## WORK CARRIER

High-speed transfer equipment optimized for precision transfer of heavy items under dusty conditions. Incorporates Shiga Yamashita's own servo control and controller system.

### Structure

- The up-down drive employs a servo link configuration to improve sealing and prevent ingress of dust, sand, and filings.
- A servo-driven rack and pinion configuration employed for horizontal movement allows high-speed with precise stopping.
- The space-saving design ensures a compact configuration while enabling transfer of heavy items.
