

MOLD-BREAKING AND CASTING SAND REMOVAL EQUIPMENT

Equipment used to break up and remove sand molds from aluminum castings using a unique pneumatic mechanism. The sealed structure of the equipment is designed with the work environment in mind to mitigate the problem of dust and noise.

Features

Designed to break up and remove outer sand molds from aluminum castings and pass only the casting onto the next process. Heat treatment following sand removal may be reduced by using this equipment in combination with a high-speed vibration machine in the next process.
